PROFESSIONAL SUMMARY

Pragmatic software developer and Marine Engineering student at Nigeria Maritime University specializing in native mobile engineering (Kotlin / Jetpack Compose), full-stack web platforms (Next.js 15, TypeScript, Supabase), and production automated workflow systems. Proven track record of launching real products from zero to production with active user adoption and verifiable engineering deliverables.

TECHNICAL SKILLS

Languages: Kotlin, TypeScript, JavaScript, Python, SQL (PostgreSQL), HTML5, CSS3

Mobile Development: Android Native, Jetpack Compose, Room Database, ML Kit (On-Device OCR), Material 3, Google Play Deployment

Web & Full-Stack: Next.js 15, React, Node.js, FastAPI, REST APIs, Tailwind CSS, Supabase (PostgreSQL, Auth, Realtime), Zustand, Recharts

Systems & Tools: Git, GitHub Actions, Docker, Linux, Paystack Payment Integration, PWA Offline-First Architecture

FEATURED PRODUCTION ENGINEERING PROJECTS

Jetty — Live in Production · Campus Marketplace & Housing Platform

2026 · jetty.francisnaga.site

- Architected and launched a full-stack campus platform serving students and businesses at Nigeria Maritime University.
- Engineered an off-campus lodge directory with direct caretaker WhatsApp verification, removing intermediate agent fraud.
- Shipped student marketplace and service booking system for cadet gear, laundry, and hostel supplies.
- Stack: Next.js, React, TypeScript, Tailwind CSS, Supabase (PostgreSQL, Auth, Storage).

Inkto — Live on Google Play · Legal Document Transcription & Audio Engine

2026 · Google Play Store

- Designed and built a native Android utility that converts physical documents and voice notes into structured editable text.
- Integrated on-device ML Kit OCR with perspective edge detection for instantaneous offline document scanning.
- Implemented local-first Room database architecture with one-tap export to formatted PDF and DOCX files.
- Stack: Kotlin, Jetpack Compose, Android SDK, Room DB, ML Kit, Supabase.

CemGuard — Open Source · Industrial Reliability Decision-Support Platform

2026 · github.com/francisnaga/CemGuard

- Engineered predictive maintenance and telemetry decision-support platform for continuous-process plants and marine engineering.
- Linked physics-engine driven digital twins mathematically to live telemetry with Weibull failure distribution calculations.
- Built real-time financial risk translator converting mechanical degradation to plant downtime exposure at ₦54M/hour.
- Stack: Next.js 15, TypeScript, Tailwind CSS, Recharts, Zustand, Supabase.

Recall — PWA · Offline-First Revision & Exam Preparation Platform

2026 · github.com/BuildItt-Inc/definam-pwa

- Developed offline-first revision platform with active recall study decks for engineering students in low-connectivity areas.
- Built FastAPI REST backend paired with client-side caching Service Workers for zero-latency question retrieval.
- Stack: Next.js PWA, FastAPI, Python, PostgreSQL.

EDUCATION

Nigeria Maritime University (NMU) · B.Eng. in Marine Engineering

Okerenkoko, Delta State · Class of 2026

- Specialization in marine power systems, mechanical reliability, fluid dynamics, and automated industrial monitoring.
